

Continuous Momentum Continues

Langley, Canada; Hot on the heels of a breakthrough year for their Continuous Variable Discharge (CVD) technology, Knelson is reporting continued strong sales in 2008 for this unique line of proprietary centrifugal gravity concentrators.

“We really got on a roll in 2007 and the momentum just keeps rolling and gaining steam” stated Doug Corsan; Knelson VP of Sales.

“What is most gratifying is that we’re now receiving repeat orders from clients who have purchased and installed units and are now coming back for more machines. In fact we have one client who has now installed CVD units in three of their plants” Corsan went onto say.

CVD64 Rotor Assembly is lowered into position

At press time, the Knelson factory is operating at new record capacity levels as work ramps up on the production of an order for six massive 300t/hr. continuous CVD64 units. “We are extremely pleased with the progress that we have made on this order thus far” commented Brett Knelson; Knelson VP of Projects

“It is our largest single contract ever and it has created a lot of anticipation and excitement throughout the company. It’s a challenging project to say the least but there is no doubt in my mind that our team will rise to the occasion” added Knelson.
